

GREENWOOD UTILITIES

COMMERCIAL ALL ELECTRIC  
RATES 109-110

Effective Date: May 10, 2019

APPLICATION:

For all General Service where the entire requirements for lights, heat, and power on the premises are supplied electrically through one meter.

Not applicable for resale or for temporary, supplementary, standby, or shared service.

CHARACTER OF SERVICE:

Single or three-phase, 60 cycles at one standard nominal voltage.

MONTHLY RATE:

Customer Charge:

Single-Phase Service \$10.00

Three-Phase Service \$13.29

Energy Charge:

First 500 kWh per month @ \$0.0884 per kWh

All additional kWh per month @ \$0.0794 per kWh

Demand Charge:

\$2.47 per kW of measured load

MINIMUM BILL:

The monthly minimum charge shall be the customer charge plus the demand charge for the currently effective measured demand or such amount as may be required for line extension customers to justify the additional investment necessary to provide service and to cover the cost of rendering service.

ADJUSTMENTS:

The amount computed at the above Monthly Rate shall be adjusted plus or minus by an amount calculated in accordance with the formula specified in the Utilities' Power Cost Adjustment Clause which is incorporated by reference as a part of this rate schedule.

Second- Plus the applicable proportionate part of any directly allocable tax, impost or assessment imposed or levied by any government authority, which is assessed or levied against the Utilities or directly affects the Utilities' cost of operation and which the Utilities is legally obligated to pay on the basis of meters, customers, or rates of, or

revenue from electric power and energy or service sold, or on the volume of the energy generated, transported, purchased for sale, or sold, or on any other basis where direct allocation is possible.

MEASURED LOAD:

The average kW supplied during the 15 minute period of greatest use during the current month, but not less than the higher of: (1) the minimum kW specified in the Agreement for Electric Service, of (2) one-third of the Capacity Requirement.

Load measurement, at Utilities' option may be made by kVA or thermal type ampere meter, in which case one kVA will be considered equivalent to one kW.

If the power factor at point of measurement is found to be less than 85%, demand measurement may be made by kVA demand meter, in which case, one kVA as registered will be considered as .85 kW, but not less than the actual kW. If the instantaneous load exceeds the highest average 15 minute load by an unusual amount, such instantaneous load may be taken as the demand used for billing.

CAPACITY REQUIREMENTS:

The highest kW of Measured Load established during the preceding eleven months, or the maximum kW specified in the Agreement for Electric Service, whichever is the greatest. In the event the instantaneous load of Customer's installation exceeds the Measured Load by more than fifty percent, such instantaneous load may be taken as the Capacity Requirement.

PAYMENT:

Bills are due and payable each month upon presentation. If a bill is not paid within fifteen days from the date thereof, Utilities have the right to suspend service.

RESERVATION:

The Greenwood Utilities Commission reserves the right to change this rate at any time it may deem necessary, and service is subject to compliance with Service Rules and Regulations and other Utilities' policies as are applicable.
