

GU Begins New Water Meter Installations

New Water Meters will provide safe and reliable service.

Greenwood Utilities has now begun installing new Water Meters for GU customers.

Will Greenwood Utilities Employees be digging near my meter? Yes, to meet new EPA audit guidelines, we must identify water service lines on both sides of the meter. This will require some digging around and near your water meter. Greenwood Utilities employees will be quickly filling any holes we create in your yard during this process.

Will my water service be interrupted? NO! The installation process does not require your water service to be cut off during this change.

Am I going to be charged for the new water meters?

No - Greenwood Utilities employees handle all installations of the new water meters at no cost to our customers and will never request or accept payment for this upgrade.

Will this affect my current bill?

The installation of new Water Meters for our customers **WILL NOT** result in any immediate increase in your water bill. Long term, this technology update should result in Greenwood Utilities continuing to be able to offer our services at very competitive rates.
